DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/12/2007 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The disclosure cited is not sufficient to establish that at the time the application was filed that the inventors had position of the negative limitation "no cellulose". It is not clear for the comparative examples, but it appears that cross-linked carboxymethyl cellulose resulted in tablets that disintegrated within 60 seconds (Specification, pages 12, 16). As such, there is no showing that all types of cellulose would result in a disintegration time that is not within 60 seconds. Further, the application when filed specifically recited that the composition did not contain microcrystalline cellulose. The Specification as indicated also had comparative examples using the cross-linked carboxymethyl cellulose or low-substituted hydroxypropyl

cellulose. Since the inventor did not when it clearly had opportunity to do so to exclude all types of cellulose, there is insufficient evidence that the inventor had contemplated the above limitation at the time the application was filed. See *In re Ruschig*, 379 F.2d 990, 995, 154 USPQ 118, 123 (CCPA 1967) (“If n-propylamine had been used in making the compound instead of n-butylamine, the compound of claim 13 would have resulted. Appellants submit to us, as they did to the board, an imaginary specific example patterned on specific example 6 by which the above butyl compound is made so that we can see what a simple change would have resulted in a specific supporting disclosure being present in the present specification. The trouble is that there is no such disclosure, easy though it is to imagine it.”); *Purdue Pharma L.P. v. Faulding Inc.*, 230 F.3d 1320, 1328, 56 USPQ2d 1481, 1487 (Fed. Cir. 2000) (“the specification does not clearly disclose to the skilled artisan that the inventors ... considered the ratio... to be part of their invention There is therefore no force to Purdue’s argument that the written description requirement was satisfied because the disclosure revealed a broad invention from which the [later-filed] claims carved out a patentable portion”).

Claim Rejections - 35 USC § 103

The Examiner withdraws the rejection of claims 1-16 under 35 U.S.C. 103(a) as being unpatentable over WO 00/78292 in view of Serpelloni et al. (US Pat. 5,573,777) solely because WO ‘292 requires the presence of celluloses whereas the presently amended claims exclude celluloses.
